TWIXY MARKETING COPILOT · WORKFLOW CATALOG

# Everything your agency does by hand, *running as a workflow.*

100 ready-made AI workflows for social media agencies — client research, content production, publishing, monitoring, and client reporting. The same process, the same quality, for every client, no matter who hits Run.

| 100 | 8 | 12+ | 24 |

| WORKFLOWS | STAGES | CHANNELS | TOP PICKS |

100 workflows · **24 top picks — what agencies run first**

# Built for the way small agencies actually break

Twixy was designed around the three problems every 2–10 person social media agency runs into as it grows.

PROBLEM 01

### The busywork tax

Every new client means the same research, the same spreadsheets, the same copy-paste relay between ten open tabs and an AI chat. Tasks take too long, errors slip in, and the process starts over with the next client.

PROBLEM 02

### Knowledge that walks out the door

Your best prompts and working methods live in someone's personal notes and memory. Output quality depends on who does the work — and when an experienced person leaves, their process leaves with them.

PROBLEM 03

### The founder bottleneck

Reviews, status-chasing, and client reporting all flow through one person. Approvals pile up, missed deadlines surface too late, and the founder's workload grows with every client added.

# How Twixy works

A workflow is your agency's process captured as a runnable asset — visible steps, built-in quality checks, and a deliverable at the end.

01

### Pick a workflow

Start from any of the 100 in this catalog, or describe your own process in plain English and Twixy builds it as a workflow. Duplicate, tweak, and it becomes yours.

02

### Point it at a client

Fill in a few inputs — the client, the niche, a profile link. The AI then works the browser like a trained assistant: researching, drafting, publishing, and reporting, step by step.

03

### Review the output, not the process

Every run ends in a concrete deliverable — an audit spreadsheet, a content batch, a client-ready report — with validation checks along the way. You review results in minutes, not methods for hours.

# A Client Onboarding & Research

001–012

Turn the messy first week into a repeatable battery of audits and briefs — identical quality for every client you sign.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 003 Instagram Account Deep Audit

**30 posts analyzed: what works, what doesn't, and five quick wins.**

Twixy opens the client's profile in a real browser and collects the last 30 posts — format, opening hook, hashtags, likes, comments, exact posting time. It computes per-post engagement against followers, then builds a two-sheet audit: raw data, plus per-format averages, the shared traits of the top 10% of posts, the weakest habits to stop, and five quick wins for week one.

**You provide** the profile link · **You get** an audit spreadsheet ready for the kickoff call

### 010 Client Onboarding Summary Pack

**Every audit merged into one kickoff deck for the client.**

After the onboarding audits have run, their outputs are scattered across files. This workflow reads all of them — account audit, site snapshot, competitor set, voice guide — and merges them into a single kickoff pack: what we found, what it means, the direction we recommend. The "here's how thoroughly we analyzed you" document, produced automatically.

**You provide** the client name · **You get** one kickoff-ready report pack

### 012 Quick-Wins Scan

**Bio, links, pinned posts — fixes you can ship in week one.**

Twixy reads the profile the way a senior strategist would — bio, link-in-bio (it clicks through and checks the landing page), pinned posts, highlights, recent grid — against a built-in review checklist. It only flags fixes that need no new content production. Each finding: current state → suggested change (with rewritten copy) → how to apply it and how long it takes.

**You provide** the profile link · **You get** a week-one fix list, evidence attached

ALSO IN THIS STAGE

001 **Client Intake → Kickoff Brief** — a messy intake questionnaire turned into a structured brief.

002 **Full Social Presence Audit** — every handle, bio, and link checked in one sweep.

004 **Brand Voice & Tone Guide** — a written voice guide extracted from existing content.

005 **Audience Persona Builder** — personas built from how real customers talk online.

006 **Website & SEO Snapshot** — the client's site crawled and scored before the first call.

007 **Hashtag Landscape Baseline** — the client's hashtag territory mapped on day one.

008 **Content Inventory & Top Performers** — catalog what exists, surface what works.

009 **Google Business Profile Audit** — listing completeness, reviews, and posts for local clients.

011 **Competitor Set Identification** — the five competitors that matter, found and profiled.

# *B* Competitor & Market Intelligence

013–024

Know exactly what's working in the niche — without anyone spending a day hopping between tabs.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 013 Competitor Instagram Teardown

**30 competitor posts dissected into steal-worthy tactics.**

The 30-post collection engine pointed at a competitor, with the analysis flipped: which formats they win with, which hooks they repeat, their posting rhythm — closing with three tactics worth porting to your client, each backed by the competitor's own numbers. When a client asks "why is [competitor] growing faster?", this is the data-backed answer.

**You provide** the competitor's link · **You get** a teardown spreadsheet + three portable tactics

### 019 Meta Ad Library Scan

**Competitors' active ads, angles, and long-running winners.**

Every ad a competitor runs is public in Meta's Ad Library — nobody has time to check it. Twixy browses it for each competitor and records their active ads: angle, hook, offer, and critically how long each has been running. An ad live for months is an ad making money — a proven message you can learn from for free.

**You provide** competitor names · **You get** a spreadsheet of live ads with proven-winner flags

### 021 Niche Trend & Format Scan

**The formats and hooks winning in the niche right now.**

Twixy explores two or three niche hashtags and collects 12–15 top-performing Reels — hook line, format type, audio, engagement. It writes a trend brief: the five dominant formats this week with examples, recurring hook patterns with the actual lines quoted, and five content ideas ready to hand to production. Run it before the weekly content meeting; the prep is done.

**You provide** the niche + hashtags · **You get** a trend brief with five ready-to-brief ideas

ALSO IN THIS STAGE

014 **Content Mix Matrix** — top five accounts × format ratios in one grid.

015 **Competitor YouTube Strategy** — cadence, title patterns, view distribution decoded.

016 **YouTube Outlier Finder** — videos that massively outperformed their channel, and why.

017 **Competitor LinkedIn Analysis** — what drives engagement on their company pages.

018 **Competitor TikTok Scan** — format choices, rhythm, standout videos.

020 **Reels Hook Harvest** — competitors' first-three-second hooks, classified.

022 **Reddit Community Intelligence** — pain points and customer language from real threads.

023 **SERP Content Gap Analysis** — topics top-ranking pages fail to cover.

024 **Viral Case Study Teardown** — one viral hit reconstructed: timeline, spread, takeaways.

# C Strategy & Planning

025–036

Your agency's thinking, captured as a process anyone on the team can run — not a senior employee's private method.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 026 30-Day Content Calendar

**Date × channel × hook — 30 rows ready for client approval.**

First it designs the frame: four to five content pillars with mix ratios and a weekly posting rhythm per channel — folding in the latest trend brief if you have one. Then it fills a 30-row calendar: channel, pillar, format, topic, a drafted hook, CTA, production effort. A validation pass checks all 30 rows are complete, no hook repeats, and the pillar mix holds.

**You provide** client, niche, audience · **You get** a 30-row approval-ready calendar

### 027 Verified Hook Library

**100 hooks: 40 harvested from winners, 60 pattern-derived.**

Twixy harvests hooks that actually performed — 15 from Instagram Reels, 15 from YouTube, 10 from Threads — verbatim with sources. It classifies them by psychological trigger, turns each type's structure into a reusable template, and generates 60 niche-fit variants: a 100-hook library the Reels Script workflow reads directly. Your senior writer's instinct, turned into a team asset.

**You provide** the niche · **You get** a 100-hook library that feeds production

### 030 Creator Shortlist & Outreach Plan

**Prioritized creators with personalized outreach angles.**

Takes your discovered creator list and does the pre-campaign grunt work: scores each creator on niche fit, audience size, and engagement quality, ranks them into tiers, and drafts a personalized outreach angle for each — what to lead with, what to offer, what to avoid. Your account manager starts sending the same afternoon.

**You provide** a creator list file · **You get** a tiered outreach plan, angle per creator

ALSO IN THIS STAGE

025 **Content Pillar Framework** — four to five pillars with mix ratios per channel.

028 **Campaign Concept Brief** — three concepts with hooks, CTAs, success metrics.

029 **UGC & Hashtag Campaign Design** — rules, rewards, and a seeding plan.

031 **Launch Teaser→Reveal Sequence** — a channel-by-channel plan from D-14 to D+7.

032 **Trend & Newsjacking Playbook** — verify the trend, pick the angle, respond in 24h.

033 **Positioning & Bio Rewrite** — profile diagnosis with ready-to-paste rewrites.

034 **Quarterly Social Roadmap** — monthly themes, goals, channel allocation.

035 **Crisis Response Playbook** — scenarios and holding statements, before you need them.

036 **Repurposing System Design** — one pillar piece mapped into ten derivative assets.

# D Content Production

037–058

Batch production at senior quality, whoever hits Run — scripts, captions, articles, and full repurpose packs.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 037 Reels Script Batch

**Ten scripts: three-second hook, body, CTA, shot directions.**

Reads your hook library, picks ten unused hooks that fit the audience — enforcing variety so no single trigger type dominates — and writes ten complete scripts: the 0–3s hook with on-screen text, a scene-by-scene body, a CTA, shot directions a creator can film from alone, and a first caption line. Validation checks every script for all four elements. Junior runs it, senior-level output comes out.

**You provide** client + hook library · **You get** ten filmable scripts in one draft file

### 048 LinkedIn Post Batch

**Five posts written in the founder's voice.**

"Can you also do our founder's personal brand?" is the request every B2B-adjacent agency hears now. This workflow takes the founder's voice notes and brand context and writes five LinkedIn posts that read like the founder wrote them — hook-first openings, story-driven bodies, no corporate filler, mixed formats so the profile doesn't feel templated.

**You provide** the founder's voice + topics · **You get** five founder-voice posts

### 051 SEO Blog Post That Outranks

**SERP teardown → winning outline → 1,500+ word draft.**

Three moves. Twixy opens the top 5–7 Google results for your keyword and dissects them — structure, length, keyword placement — finding the gaps none of them cover. It designs an outline built to beat them, then writes the full 1,500+ word draft with image-slot directions and a meta description. Validation enforces length, headings, and a healthy keyword frequency.

**You provide** the target keyword · **You get** a publish-ready draft built to outrank

### 057 Video → 10-Asset Repurpose Pack

**One long video becomes posts, threads, and shorts ideas.**

Give it one YouTube link. Twixy pulls the transcript, maps the strongest moments and quotable lines, and plans ten derivative assets — Instagram posts, an X thread, Shorts concepts, a newsletter angle — each with its own hook and outline, referencing the exact part of the video it comes from. One production becomes a month of channel content.

**You provide** one video URL · **You get** a ten-asset plan with hooks and outlines

ALSO IN THIS STAGE

038 **Captions & Hashtag Sets** — captions and tag sets for a whole script batch.

039 **Carousel Copy Batch** — three carousels with slide-by-slide copy.

040 **Story Interaction Series** — seven days of polls, quizzes, and sliders.

041 **Threads Post Batch** — ten conversation-starters from the latest trend scan.

042 **X Thread Batch** — three long-form storytelling threads.

043 **One-liner Hook Bank** — thirty single-line hooks by psychological trigger.

044 **Shorts Script Batch** — ten scripts with two-second hooks and loop endings.

045 **Long-form Video Script** — full script with chapters from a reference analysis.

046 **Title & Thumbnail Copy A/B** — ten title variants plus thumbnail text per video.

047 **TikTok Script Batch** — ten scripts mapped to current trends.

049 **LinkedIn Article Draft** — thought-leadership long-form, hook-first.

050 **Facebook Post Batch** — five posts tuned for shares and comments.

052 **Newsletter Issue Draft** — five subject lines, story-driven body, CTA.

053 **Press Release & Journalist Pitch** — a release plus personalized pitch notes.

054 **UGC & Testimonial Remix** — customer reviews turned into video scripts.

055 **Review Mining → Social Proof** — real reviews converted into persuasive copy.

056 **Landing Page Copy Set** — ten headlines plus section copy from page analysis.

058 **Client-Voice Rewrite Batch** — generic drafts adapted to the client's voice guide.

# *E* Publishing & Engagement

059–070

Real posting and real engagement from the client's own accounts — capped rounds, transparent behavior, zero spam.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 062 Cross-posting Round

**One piece adapted and posted to Instagram, Threads, and X.**

Reads one approved draft, rewrites it per channel — each platform gets its own length, tone, and formatting rather than a copy-paste — then actually publishes to each in sequence, working the browser like a person would, and reports the three live URLs. The fifteen-minute "post it everywhere" chore someone does every day, gone.

**You provide** the approved draft · **You get** three live, channel-adapted posts

### 063 Targeted Comment Round

**10–12 genuine value comments on top niche posts.**

A growth tactic with guardrails built in. From the client's own account, Twixy scouts 12 active posts in niche hashtags, actually reads each one, and drafts a comment responding to its specific content. A validation step screens every draft — no copy-paste phrasing, no promotion, no links — before it posts, paced naturally, capped at 12 per round, with a full log.

**You provide** hashtags + brand voice · **You get** 10–12 posted comments with a full log

### 067 Inbound Comment Replies

**Comments on the client's own posts, answered in voice.**

The engagement direction that quietly eats the most account-manager hours. Twixy collects new comments on the client's recent posts, drafts replies in the client's voice — answers, thanks, a question back to keep threads alive — posts them, and reports the round. Community management becomes a daily fifteen-minute round instead of a standing distraction.

**You provide** the account + brand voice · **You get** answered comments and a round report

ALSO IN THIS STAGE

059 **Instagram Post Publish** — the approved draft published, URL reported back.

060 **Threads Publish** — publish from the approved draft, URL reported back.

061 **X Publish & Engage** — post, then join five to ten relevant conversations.

064 **Threads Conversation Round** — 10–12 replies inside niche conversations.

065 **Creator DM Outreach** — 10–15 personalized DMs from an approved shortlist.

066 **Mention & Reply Round** — brand mentions found and answered.

068 **YouTube Community Post** — polls and posts published to the community tab.

069 **Google Business Post** — updates and offers published to the listing.

070 **UGC Thank-You Round** — every campaign-tag poster thanked, personally.

# *F* Monitoring & Listening

071–078

Problems surface in a morning report — not in an angry client call.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 071 Brand Mention Sweep

**X, Threads, and Reddit mentions triaged with reply drafts.**

Twixy searches X and Threads for the brand and product names — including replies and quote posts — then sweeps Reddit, prioritizing questions and complaints. Every mention gets two labels: sentiment, and urgency (respond today / this week / no action). The report leads with urgent items, each with a drafted reply ready to adapt. One morning read and the account manager knows exactly what needs answering.

**You provide** brand + product names · **You get** a triaged mention report with reply drafts

### 076 Negative-Signal Early Warning

**Complaint spikes and brewing issues caught early.**

The defensive version of the mention sweep. It scans specifically for trouble: complaint clusters forming around one issue, a thread gaining traction with negative sentiment, a shifting review pattern. Findings are ranked by blast radius, worst first, with suggested first responses. It flips "have you seen this?" from the client into "we caught something this morning — here's our plan."

**You provide** the brand name · **You get** an early-warning report, worst first

ALSO IN THIS STAGE

072 **Review Site Sweep** — new Google, Yelp, Trustpilot reviews with response drafts.

073 **Competitor Activity Sweep** — what every competitor shipped this week.

074 **Multi-Client Trend Alerts** — one sweep, alerts routed to each client's niche.

075 **Comment Sentiment Analysis** — recent comments classified, themes surfaced.

077 **Campaign Hashtag Tracker** — participation counts and top UGC, tracked.

078 **Follower Growth Tracker** — every client and competitor account, snapshotted weekly.

# G Reporting & Client Communication

079–092

Client-ready reporting that doesn't consume your weekend — plus the sales assets that win the next client.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 082 Monthly Client Report Pack

**The whole month merged into a client-ready pack with next steps.**

Reads everything the month produced — weekly reports, trackers, briefs — and rolls it up per channel. Then it generates the pack: a one-page executive summary in plain client language, per-channel sections with the winning content and why it worked, misses and their lessons, what got validated this month, and five prioritized actions for next month. The month-end all-nighter becomes a review pass.

**You provide** client + month · **You get** a send-ready monthly report pack

### 089 Client Weekly Email Draft

**Reports turned into a friendly client update, ready to send.**

Reads the week's reports for one client and turns them into a short, warm update email: three highlights, the numbers that matter to this client, anything needing their input, next week's plan. The difference between attaching a spreadsheet and writing three useful paragraphs every Friday is retention — this makes the second kind take five minutes.

**You provide** the client name · **You get** a paste-and-send weekly email

### 091 Prospect Audit Teaser

**A scored audit of any prospect, as a pitch-ready PDF.**

Your new-business weapon. Twixy quick-audits a prospect's profile and last ten posts, scores five dimensions from 1–10 with a one-line evidence note each, then picks the three highest-impact opportunities — phrased so the prospect recognizes them as true. A validation step kills any claim not grounded in observed data. Output: a two-to-three page PDF with a scorecard and a soft close inviting a 20-minute call. Attach it to cold outreach and watch reply rates change.

**You provide** the prospect's link · **You get** a pitch-ready audit PDF

ALSO IN THIS STAGE

079 **Weekly Instagram Report** — account insights turned into a client-ready spreadsheet.

080 **Weekly Multi-Channel Snapshot** — one page of status across every channel.

081 **Monthly YouTube Report** — studio metrics, top videos, retention notes.

083 **Content Winners & Learnings** — the top 10% of posts, and the why behind them.

084 **Best Posting Time Analysis** — post-time × engagement correlation.

085 **Share-of-Voice Report** — client vs. competitor mention share, by channel.

086 **Campaign Wrap-Up Report** — results vs. goals, learnings, next steps.

087 **Creator Campaign ROI** — per-creator reach, engagement, conversion.

088 **GA4 Social Traffic Report** — social-sourced sessions and conversions, explained.

090 **Quarterly Business Review Deck** — the quarter's results and next plan, as slides.

092 **Client Case Study Write-Up** — results turned into a marketing asset for your agency.

# *H* Agency Operations & Knowledge

093–100

Where individual know-how becomes company property.

SPOTLIGHT · WHAT AGENCIES RUN FIRST

### 093 SOP From a Finished Run

**A completed process turned into a step-by-step playbook.**

When a piece of work goes well, the knowledge usually evaporates. This workflow reads the notes and records of a finished process and rewrites it as a playbook anyone can follow: steps in order, checks at each stage, pitfalls and how to avoid them. Good work stops being a one-time event and becomes part of the company manual.

**You provide** the process notes · **You get** a repeatable step-by-step playbook

### 096 Pre-Publish QA Checklist

**Drafts checked against the voice guide before they ship.**

Before anything goes out, this workflow checks the draft against the client's voice guide and your QA rules: tone, banned words, required elements, claim safety. It returns a pass/fix list, item by item, with suggested corrections. The machine does the first pass, the human does the final approval — and new-hire output ships with confidence from week one.

**You provide** the draft + voice guide · **You get** a pass/fix report per item

### 097 Weekly All-Clients Digest

**One founder-facing digest across every client.**

Scans every client's reports and outputs from the week and produces one page for the founder: a status line per client, what went well, what needs attention — flagged, not buried. Hours of piecing together the state of the agency from Slack threads compress into one Monday-morning read. Client count grows from five to fifteen; the founder's awareness doesn't break.

**You provide** nothing — it reads what's there · **You get** a one-page founder digest

ALSO IN THIS STAGE

094 **Prompt Library Consolidation** — scattered prompts merged into one team library.

095 **New-Hire Onboarding Guide** — SOPs compiled into a first-two-weeks guide.

098 **Workload & Capacity Snapshot** — deliverables per client vs. team capacity.

099 **Meeting Notes → Actions** — raw notes structured into owners and deadlines.

100 **Knowledge Base Sync** — validated learnings pushed to the team wiki.

# Playbooks: workflows that chain into outcomes

Single workflows save hours. Chained together, they replace entire operating routines.

### New-Client Week 1

**Intake Brief** → **IG Audit** → **Competitor Set** → **Teardown** → **Pillars** → **Calendar** → **Onboarding Pack** — a signed client to a kickoff-ready plan in days, not weeks.

### Weekly Content Engine

**Trend Scan** → **Reels Scripts** → **Captions** → **Publish** → **Comment Round** → **Weekly Report** — the full weekly loop for one client, on rails.

### Founder-Bottleneck Killer

**QA Checklist** → **Ops Digest** → **Client Email** → **Monthly Pack** — review outputs in minutes instead of chasing status all week.

### New-Business Machine

**Prospect Audit** → **Case Study** → **Press Release** → **Creator Shortlist** — sales assets produced with the same engine that serves clients.

### Knowledge Flywheel

**SOP Write-Up** → **Prompt Library** → **Onboarding Guide** → **Wiki Sync** — every good run makes the whole team permanently better.

## See it run on one of your clients

Pick any workflow in this catalog and we'll run it live on a real account of yours — a full audit, a content batch, or a client report, produced in front of you in a 20-minute walkthrough.

Every workflow is also a template: duplicate it, adjust it in plain-English chat, and it becomes your agency's own process — shareable with your whole team.
